

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

the total number of sprints James runs in a week is 3 sprints * 3 days = 9 sprints

each sprint he covers 60 meters

so total distance James runs in a week is $9 * 60 = 540$ meters

</think>

<answer>

540 meters </answer>
