

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

the total number of sprints he does a week is 3 sprints a week x 3 times a week = 9 sprints .

so , he runs 9 sprints x 60 meters per sprint = 540 meters a week .

</think>

<answer>

540 meters </answer>
