

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
From the first 15 glasses , Kylar will spend $15 * 5 = \$75$.
He has to pay for half the price for the 16th glass , so Kylar will pay $1 / 2 * 5 = \$2.5$ for it .
That means that for all 16 glasses Kylar has to pay $75 + 2.5 = \$77.5$
</think>
<answer>
77.5
</answer>
