

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
One glass costs \$ 5 and another one costs $60 / 100 * 5 = \$ 3$ cheaper .
So if every second glass costs only $60 / 100 * 5 = \$ 3$ cheaper , then the second glass costs $5 - 3 = \$ 2$
To buy 16 glasses Kylar needs to buy $2 * 8 = 16$ glasses .
Kylar needs to pay $8 * 5 + 8 * 2 = 40 + 16 = \$ 56$ for all glasses .
</think>
<answer>
56
</answer>
