

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
The deal is for every second glass , so for every pair , Kylar would need to pay : $\$5 + (\$5 * 0.6) = \$5 + \$3 = \$8$
There are $16 / 2 = 8$ pairs in 16 glasses
So Kylar needs to pay : $8 * 8 = \$64$ for them all .
</think>
<answer>
64
</answer>
