

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>

He invests $80000 + 50000 = \$130000$ into the house

It's increased in value by $80000 * 1.5 = \$120000$

So it's now worth $80000 + 120000 = \$200000$

That means he made a profit of $200000 - 130000 = \$70000$

</think>

<answer>

70000

</answer>
