

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
It increased in value by $1.5 * 80000 = \$120,000$
So the house was worth $120,000 + 80,000 = \$200,000$ after the improvements
So he sold it for $200,000 - 50,000 = \$150,000$
So he made a profit of $150,000 - 130,000 = \$20,000$
</think>
<answer>
20000
</answer>
