

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>

Every second glasses costs $5 * 0.6 = \$3$.

So in pairs, the glasses cost $5 + 3 = \$8$.

There are $16 / 2 = 8$ such pairs in 16 glasses.

That means for pairs the payment is $8 * 8 = \$64$.

The answer is 64.
