

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
First, add the cost to purchase the flips house: $\$80,000 + \$50,000 = \$130,000$
Next, figure out what the value of the house after the flip was by multiplying the original value by 1.5
 $0: \$80,000 * 1.50 = \$120,000$
Finally, subtract the total costs from the new value to find the profit: $\$120,000 - \$130,000 = -\$10,000$
</think>
<answer>
10000
</answer>
