

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

Number of sprints James runs per week = 3 times

Distance covered per sprint = 60 meters

Total distance covered in one sprints = $3 * 60 = 180$ meters

Total distance covered in a week = $180 * 3 = 540$ meters

</think><answer>540</answer>
