

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
He bought the house for 800 00 dollars
He spent 500 00 dollars on repairs
The total cost is 800 00 + 500 00 = 130 000 dollars
If the house value increased by 150 % that means the new value is 800 00 + 130 000 = 200 000
He will sell the house for 200 000 dollars
To find his profit he will subtract his cost from the sale value
200 000 - 130 000 = 700 00 dollars
</think>
<answer> 700 00 </answer>
