

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<think>

She has 20 chickens , 15 cups of feed in the morning and 25 cups in the afternoon

In total she has fed the chickens $15 + 25 = 40$ cups of feed so far

Since each chicken gets 3 cups of feed per day , $20 * 3 = 60$ cups of feed in total

Since Wendi has already given out 40 cups of feed she needs $60 - 40 = 20$ more cups of feed

</think>

<answer> 20 </answer>
