

**Question:**

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

**Reasoning + Answer:**

<think>

He runs 3 sprints 3 times a week

He runs 60 meters each sprint

Total meters run in a week = 3 \* 60 \* 3

Total meters run in a week = 3 \* 60 \* 3

Total meters run in a week = 3 \* 60 \* 3

Total meters run in a week = 3 \* 60 \* 3

Total meters run in a week = 3 \* 60 \* 3

Total meters run in a week = 3 \* 60 \* 3

</answer>
