

Question:

A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

<think> Okay , so let's analyze the situation . We know that the robe takes 2 bolts of blue fiber . The robe requires half as much white fiber as the blue fiber , which means it needs $2 / 2 = 1$ bolt of white fiber . To find the total number of bolts , we need to add the number of bolts of blue and white fibers . So , the total number of bolts is 2 (blue) + 1 (white) = 3 .</think><answer>3</answer>
