

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<think>
she gives 15
then she gives 25
so she gave 15 + 25
15 + 25 = 40
she gave 40
she needs to give 3 * 20
3 * 20 = 60
she gave 40
she needs to give 60 - 40
60 - 40 = 20
she needs to give 20
so she needs to give 20
</think>< answer > 20 </answer>
