

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<think>
Total number of cups fed in the morning = 15
Total number of cups fed in the afternoon = 25
Total cups fed in the first two meals = 15 + 25 = 40
Total cups of feed required per chicken per day = 3
Total cups of feed required for 20 chickens per day = 3 * 20 = 60
Cups of feed needed for the final meal = Total cups required per day - Cups fed in the first two meals
= 60 - 40
= 20
</think>
<answer>
20 cups </answer>
