

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>To start , we need to find out how many eggs Janet does not sell . She starts with 1 6 eggs and consumes 3 and gives away 4 .

To find out how many she sells , we subtract the consumed and given eggs from the initial total :

$$16 - 3 - 4 = 9$$

Next , we find out how much money she makes by selling the remaining eggs . She sells each egg for \$ 2 .

Therefore , we multiply the number of eggs sold by their price to get the daily earnings at the market :

$$9 * \$2 = \$18$$

So , Janet makes \$ 18 every day at the farmers ' market . </think>

<answer>\$ 18 </answer>
