

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> To find out how much Janet makes every day at the farmers ' market , we need to follow these steps :

- 1 . First , determine the total number of eggs she lays per day : 1 6 eggs .
- 2 . Next , calculate how many eggs she uses for breakfast and baking : she eats 3 for breakfast and bakes 4 eggs every day . Therefore , $3 + 4 = 7$ eggs are used .
- 3 . Subtract the total used eggs (7) from the total eggs she lays per day (1 6) to find how many eggs she has left : $16 - 7 = 9$ eggs .
- 4 . Finally , the income she makes is based on selling the left eggs at \$ 2 per egg . So , multiply the remaining eggs (9) by 2 to find the revenue : $9 \times 2 = 18$ dollars .
