

Question:

Two trains leave San Rafael at the same time. They begin traveling westward, both traveling for 80 miles. The next day, they travel northwards, covering 150 miles. What's the distance covered by each train in the two days?

Reasoning + Answer:

<thinking process >

Step 1 : We are given that both trains travel 80 miles west ward on the first day and 150 miles north ward on the next day .

Step 2 : The question is asking for the total distance covered by each train over the two days .

Step 3 : Total distance = distance traveled west ward + distance traveled north ward .

So , total distance = 80 miles + 150 miles = 230 miles .

Step 4 : Since both trains do the exact same journey (same distances), each train covers 230 miles .

Answer should be in miles , and both trains are identical in travel .

< answer > 230 </ answer >
