

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
He's going to pay for $8 * 5 = \$40$ for the first glasses .
Every second glass costs him $5 * 0.6 = \$3$.
The second glasses cost in total $8 * 3 = \$24$.
For 16 glasses , he needs to pay $24 + 40 = 64\$$.
</think>
<answer>
6
