

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
First find the total number of eggs Janet uses every day : 3 eggs/morning + 4 eggs/muffins = 7 eggs
Then subtract the number of eggs she uses from the number of eggs her ducks lay to find the number she has left to sell : 16 eggs/day - 7 eggs/day = 9 eggs/day
Then multiply the number of eggs she sells by the number she sells them for to find the total amount of money she makes per day : 9 eggs/day * \$ 2 / egg = \$ 18/day
</think>
< answer >
18
</answer>
