

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<think>
In one feeding session Wendi gives each bird 3 cups of mixed feed , so she gives a total of 3 cups/bird * 20 birds = 60 cups of bird food .
In the morning she feeds her chickens 15 cups and in the afternoon she feeds them 25 cups , so she has 60 cups - 15 cups - 25 cups = 20 cups of bird food remaining for her last evening feeding .
</think>
