

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
Every second pair of glasses would cost Kevin $0.6 * 5 = \$3$.
That means for every two glasses , he would pay $5 + 3 = \$8$.
So for 16 glasses Kevin would pay $8 * 2 = \$16$.

</think>
<answer>
16
</answer>
