

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
Every second glass in sixteen is $60 / 100 * 5 = \$3$.
So for every second glass, Kylar only has to pay 3\$.
There are $16 / 2 = 8$ glasses that are sold for 3\$.
So Kylar has to pay $8 * 3 = \$24$ for those glasses.
The other 8 glasses cost $8 * 5 = \$40$.
So in total Kylar has to pay $24 + 40 = 64$ \$.
</think>
<answer>
64
</answer>
