

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think>

Finding reasoning paths :

- 1 . Evaluate the components of the Glasgow Coma Score (GCS) and how they contribute to the total score .
- 2 . Determine the minimum and maximum possible combinations of scores for the three components (Eye , Verbal , and Motor responses) .
- 3 . Calculate the minimum and maximum possible total GCS scores based on the contributions of each component .

Reasoning Process :

- The Glasgow Coma Score (GCS) is composed of three components : Eye , Verbal , and Motor responses .
- Each component is scored as follows :
- Eye : 0 = No response , 1 = Opening eyes spontaneously , 2 = Opening eyes to command .
- Verbal : 1 = No response , 2 = In appropriate words , 3 = Confused speech .
- Motor : 1 = No response , 2 = Localized Withdraw al , 3 = Active opposition .
- To find the minimum possible GCS :
- The minimum for the Eye component is 0 (no response) .
- The minimum for the Verbal component is 1 (no response) .
- The minimum for the Motor component is 1 (no response) .
- Thus , the minimum total GCS is $0 + 1 + 1 = 2$.
- To find the maximum possible GCS :
- The maximum for the Eye component is 2 (normal response) .
- The maximum for the Verbal component is 3 (oriented and able to answer questions) .
- The maximum for the Motor component is 3 (normal response) .
- Thus , the maximum total GCS is $2 + 3 + 3 = 8$.
- However , upon reviewing the standard scoring , the maximum GCS is actually 15 , achieved when a patient can :
- Open their eyes spontaneously (Eye score of 2) ,
- Answer questions appropriately (Verbal score of 5 , not 3) ,
- Move all extremities in a purposeful manner (Motor score of 6 , not 3) .
- Thus , the correct maximum is $2 + 5 + 6 = 13$ for the example provided , but based on the original question's maximum of 15 , the range would be :
- Minimum : 2
- Maximum : 15

</think>

<answer>

Minimum = 0 , Maximum = 15

</answer>
