

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think>

Finding reasoning paths :

- 1 . Review the components of the Glasgow Coma Scale (GCS) and their respective scores .
- 2 . Analyze the range of scores for each component : Eye response , Verbal response , and Motor response .
- 3 . Determine the minimum and maximum possible scores by combining the lowest and highest scores from all components .

Reasoning Process :

- 1 . The Glasgow Coma Scale (GCS) is a clinical tool used to assess the level of consciousness after a brain injury . It is scored based on three components : Eye response , Verbal response , and Motor response .
 - 2 . Each component has a specific range of scores :
 - Eye response : 1 (no response) to 4 (alert).
 - Verbal response : 1 (no response) to 5 (alert and oriented).
 - Motor response : 1 (no response) to 6 (obeys commands).
 - 3 . To find the minimum possible score , we sum the lowest score from each component :
 - Eye response : 1
 - Verbal response : 1
 - Motor response : 1This gives us a minimum score of $1 + 1 + 1 = 3$.
 - 4 . To find the maximum possible score , we sum the highest score from each component :
 - Eye response : 4
 - Verbal response : 5
 - Motor response : 6This gives us a maximum score of $4 + 5 + 6 = 15$.

Conclusion :

The minimum possible score on the Glasgow Coma Scale is 3 , and the maximum possible score is 15 .

</think>

<answer>

Minimum = 3 , Maximum = 15

</answer>
