

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think>

Finding reasoning paths :

- 1 . Understanding the Glasgow Coma Scale (GCS) and its components .
- 2 . Determining the scoring system for each part of the GCS : eye opening , verbal response , and motor response .
- 3 . Calculating the maximum possible score by summing the highest scores for each component .
- 4 . Determining the minimum possible score by considering the lowest scores for each component .

Reasoning Process :

- 1 . The Glasgow Coma Scale is a scoring system used to assess the level of consciousness in a patient . It is composed of three main components : eye opening , verbal response , and motor response .
- 2 . The scoring system for each component is as follows :
 - Eye opening : Can the patient open their eyes to verbal stimuli (0) or painful stimuli (4).
 - Verbal response : Does the patient follow commands (1) or say words clearly (5).
 - Motor response : Can the patient move the arm against strong resistance (1) or move the arm independently (5).
- 3 . The maximum possible score for each component is 5 , as these are the highest achievable scores within the scoring system .
- 4 . To calculate the maximum possible GCS score , we sum the maximum scores for each component :
 - Eye opening : 5
 - Verbal response : 5
 - Motor response : 5
 - Maximum GCS = 5 + 5 + 5 = 15
- 5 . The minimum possible GCS score occurs when the patient has the lowest scores for each component :
 - Eye opening : 0
 - Verbal response : 1
 - Motor response : 1
 - Minimum GCS = 0 + 1 + 1 = 2

Conclusion :

The minimum possible value for the Glasgow Coma Score is 2 , and the maximum possible value is 15 .

</think>

< answer >

Minimum = 0 , Maximum = 15

</answer>
