

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think>

Finding Reasoning Paths :

1. The Glasgow Coma Scale (GCS) is a clinical scoring system used to assess the level of consciousness in patients . The score ranges from 3 to 15 based on eye opening , verbal response , and motor response . To determine the minimum and maximum values , we need to evaluate the physiological limits of consciousness .

2. The minimum value (3) corresponds to a vegetative state where the patient is unresponsive to stimuli and shows no motor or verbal responses .

3. The maximum value (15) corresponds to full consciousness where the patient responds normally to stimuli with full eye opening , verbal , and motor responses .

4. The GCS is used to assess the severity of head injuries and other conditions affecting consciousness . The score can be used to stratify the risk of morbidity and mortality based on the initial score .

5. The GCS scoring criteria are based on observable clinical signs , and the minimum and maximum values are defined by the absence or presence of these signs .

Reasoning Process :

1. The Glasgow Coma Scale is a standardized tool used to assess the level of consciousness by evaluating eye opening , verbal response , and motor response . The score is derived from these three parameters .

2. The minimum value of 3 is assigned when a patient shows no response to any of the three parameters . This indicates a vegetative state where the patient is unresponsive to all stimuli .

3. The maximum value of 15 is assigned when a patient shows full eye opening , verbal , and motor responses . This indicates full consciousness .

4. The score can be used to stratify the severity of head injuries and other conditions affecting consciousness . A higher score generally indicates a better prognosis .

5. The GCS is widely accepted and standardized , making it a reliable tool for assessing consciousness .

Conclusion :

The Glasgow Coma Scale has a minimum possible value of **3** and a maximum possible value of **15** .

</think>

<answer>

Minimum = 3 , Maximum = 15

</answer>
