

Question:

A 17-year-old teenager is brought to the emergency department with severe bleeding from his right hand. He was involved in a gang fight about 30 minutes ago where he received a penetrating stab wound by a sharp knife in the region of the ‘anatomical snuffbox’. A vascular surgeon is called in for consultation. Damage to which artery is most likely responsible for his excessive bleeding?

Answer Choices:

- A. Radial artery
- B. Ulnar artery
- C. Princeps pollicis artery
- D. Brachial artery

Reasoning + Answer:

<think>
To solve this problem , we need to identify the artery most likely affected given the location of the stab wound . The "anatomical snuffbox" is a region on the radial , dorsal wrist pointing laterally in the distal radioulnar joint close to the thumb with a heightened vascular mua fooA!.
