

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think>

Finding reasoning paths:

- 1. Understanding the Glasgow Coma Scale (GCS) and its components.
- 2. Identifying the scoring range for each component of the GCS.
- 3. Calculating the minimum and maximum scores.

Reasoning Process:

1. The Glasgow Coma Scale (GCS) is a neurological examination tool used to assess the level of consciousness in a person. It evaluates three aspects of brain function: Eye opening, Motor response, and Verbal response.

2. Each component is scored individually as follows:

- Eye opening: 1 (None), 2 (Withdraws to pain), 3 (Confused), 4 (Localizes to painful stimulation), 5 (Opens eyes spontaneously).
- Motor response: 1 (None), 2 (Withdraws to pain), 3 (Locally responds to pain), 4 (Extension to pain), 5 (Withdraws to verbal commands).
- Verbal response: 1 (None), 2 (Sounds), 3 (Incomprehensible words), 4 (Confused speech), 5 (Oriented speech).

3. The minimum score occurs when the person shows no response in all three components:

- Eye opening score = 1
- Motor response score = 1
- Verbal response score = 1

Total minimum score = 1 + 1 + 1 = 3.

4. The maximum score occurs when the person shows the best possible response in all three components:

- Eye opening score = 5
- Motor response score = 5
- Verbal response score = 5

Total maximum score = 5 + 5 + 5 = 15.

Conclusion:

The minimum possible value of the Glasgow Coma Score is 3, and the maximum possible value is 15.

</think>

<answer>

Minimum = 3, Maximum = 15

</answer>
