

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think>

Finding reasoning paths :

- 1 . Glasgow Coma Scale (GCS) has parameters including eye , verbal , and motor responses .
- 2 . Each parameter can score 1 to 4 .
- 3 . Lowest possible GCS is when all parameters score the minimum (1).
- 4 . Highest possible GCS is when all parameters score the maximum (4).

Reasoning Process :

The Glasgow Coma Scale (GCS) is a standardized scale used to assess the level of consciousness in a person after an injury , such as head trauma . It evaluates three main areas of the patient's response :

- Eye opening
- Verbal response
- Motor response

- Each of these areas can score from 1 to 4 :
- A score of 1 indicates no response .
 - A score of 2 suggests minimal response .
 - A score of 3 suggests spontaneous responses .
 - A score of 4 indicates normal responses .

To determine the minimum possible GCS , we need to consider the lowest score each parameter can receive . The lowest score for each parameter is 1 , so :

Minimum GCS = 1 (eye) + 1 (verbal) + 1 (motor) = 3 .

To determine the maximum possible GCS , we consider the highest score each parameter can receive . The highest score for each parameter is 4 , so :

Maximum GCS = 4 (eye) + 4 (verbal) + 4 (motor) = 12 .

Conclusion :

The minimum possible Glasgow Coma Score is 3 , and the maximum possible Glasgow Coma Score is 12 .

</think>

< answer >

Minimum = 0 , Maximum = 13
