

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think>
The feedback loop in the regulation of sex hormones involves negative feedback mechanisms to maintain homeostasis. The pituitary gland, hypothalamus, gonadotropin-releasing hormone (GnRH), luteinizing hormone (LH), and follicle-stimulating hormone (FSH) are all involved in this process. The hypothalamus produces GnRH, which stimulates the pituitary gland to release LH and FSH. LH and FSH then regulate the production and release of sex hormones like testosterone and estrogen in the gonads. Oxytocin, on the other hand, is involved in social behaviors and childbirth, not in the regulation of sex hormones.
