

Question:

What is aschizo-affectivedisorder ?

Answer Choices:

- A. A schizo-affective disorder is a term used to describe a personality disorder with features similar to both schizophrenia and affective disorders.
- B. A schizo-affective disorder exclusively involves psychotic symptoms without any mood disturbances.
- C. A schizo-affective disorder is a psychological condition where mood disorders occur as a reaction to schizophrenia treatment.
- D. A schizo-affective disorder is characterized by periods of well-being between episodes of schizophrenia and mood disorders.
- E. A schizo-affective disorder is a combination of schizophrenic and affective disorders, where the affective symptoms must develop before or simultaneously with the psychotic symptoms.
- F. A schizo-affective disorder is a subtype of affective disorders.
- G. A schizo-affective disorder is a subtype of schizophrenia.
- H. A schizo-affective disorder develops after the onset of psychosis.
- I. A schizo-affective disorder is a chronic condition with only affective or mood-related symptoms.
- J. A schizo-affective disorder is a mild form of schizophrenia that does not include affective symptoms.

Reasoning + Answer:

<think>
Schizophrenia and mood disorders (affective disorders, including depression and mania) often co-occur; in schizophrenia, mood disturbances are relatively common and can fluctuate with illness course. When a primary psychotic disorder presents, mood symptoms are also present. ICD-10 and DSM-IV-TR define schizoaffective disorder as a schizophrenia-like or psychotic presentation with one or more mood episodes (mania, hypomania, major depression, dysthymia), where the mood episode must occur first or together with the psychotic feature. That timing distinguishes schizoaffective disorder from schizophreniaâmania (schizophrenia with hypomania) or manic episode, and also distinguishes it from a depressive episode without psychotic symptoms.

Therefore, the correct answer is E: A schizo-affective disorder is a combination of schizophrenic and affective disorders, where the affective symptoms must develop before or simultaneously with the psychotic symptoms.
