

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think>

Feedback loop regulation of sex hormones involves several steps , starting with the hypothalamus , which secretes gonadotropin-releasing hormone (GnRH), which stimulates the pituitary gland to release luteinizing hormone (LH) and follicle-stimulating hormone (FSH). Both LH and FSH then promote the production and regulation of sex hormones , including testosterone .

Oxytocin is a hormone involved in social bonding and child rearing , not directly involved in the feedback loop of sex hormone production .

The luteinizing hormone (LH) and follicle-stimulating hormone (FSH) are both key hormones in the feedback loop , with their levels typically falling when sex hormone levels are high , and rising when sex hormone levels are low , and both stimuli the production of sex hormones , so therefore doesn't influence as a negative feedback to sex hormone production .
