

Question:

At birth, the least developed part of the brain is the

Answer Choices:

- A. visual system
- B. thalamus
- C. frontal lobe
- D. brain stem
- E. parietal lobe
- F. cerebellum
- G. cortex
- H. basal ganglia
- I. hypothalamus
- J. limbic system

Reasoning + Answer:

<think>

At birth , the development of different parts of the brain is at various stages , depending on their complexity . However , the least developed part of the brain at birth is typically the one with the highest level of complexity and functionality in adults . In adults , the cortex is the outer layer responsible for various higher-level cognitive processes , such as thought , action , and perception . It is estimated that the brain 's cortex continues to mature even after birth and reaches full development in the mid-twenties or later , making it one of the last parts of the brain to fully develop . Thus , comparing this developmental process with the answer choices provided , option G cortex corresponds most accurately to the description in question .</think>< answer > G . cortex
