

Question:

Which of the following factors is associated with a decreased risk of Alzheimer's?

Answer Choices:

- A. Being African or Hispanic American
- B. A lower level of education
- C. Living in a city
- D. Being married
- E. Having a family history of Alzheimer's
- F. High intake of saturated fats
- G. Older age
- H. Eating fish
- I. Being a smoker
- J. Drinking alcohol regularly

Reasoning + Answer:

<think>
To determine which factor is associated with a decreased risk of Alzheimer's , let's consider the general knowledge about the disease and its risk factors . Several factors are known to increase or decrease the risk of Alzheimer's , such as age , education , genetics , lifestyle , and other health conditions . From the given options , education level , having a stable social connection through marriage , and maintaining a healthy diet , such as through consuming fish , have been linked to lower risks in various studies . However , smoking and heavy alcohol consumption are known to contribute to brain health deterioration . Thus , factors that support healthy living and brain function would likely reduce the risk . Consider lifestyle habits like maintaining social connections and a balanced diet . </think><answer> D . Being married
