

Question:

At birth, the least developed part of the brain is the

Answer Choices:

- A. visual system
- B. thalamus
- C. frontal lobe
- D. brain stem
- E. parietal lobe
- F. cerebellum
- G. cortex
- H. basal ganglia
- I. hypothalamus
- J. limbic system

Reasoning + Answer:

<think>

At birth , the central nervous system of human beings , in its most basic form , has formed all the basic brain regions , but their level of development and myelination vary greatly . Considering the development and complexity , the brain region that usually takes the longest to fully develop is the frontal lobe . This region is vital for higher cognitive functions , decision-making , problem-solving , and social behaviors . An underdeveloped or immature frontal lobe can be observed in infants , as they may lack fully developed impulse control , impulse decision-making , and adaptive regulation . This makes option C the most logical choice .
