

Question:

What is aschizo-affectivedisorder ?

Answer Choices:

- A. A schizo-affective disorder is a term used to describe a personality disorder with features similar to both schizophrenia and affective disorders.
- B. A schizo-affective disorder exclusively involves psychotic symptoms without any mood disturbances.
- C. A schizo-affective disorder is a psychological condition where mood disorders occur as a reaction to schizophrenia treatment.
- D. A schizo-affective disorder is characterized by periods of well-being between episodes of schizophrenia and mood disorders.
- E. A schizo-affective disorder is a combination of schizophrenic and affective disorders, where the affective symptoms must develop before or simultaneously with the psychotic symptoms.
- F. A schizo-affective disorder is a subtype of affective disorders.
- G. A schizo-affective disorder is a subtype of schizophrenia.
- H. A schizo-affective disorder develops after the onset of psychosis.
- I. A schizo-affective disorder is a chronic condition with only affective or mood-related symptoms.
- J. A schizo-affective disorder is a mild form of schizophrenia that does not include affective symptoms.

Reasoning + Answer:

<think>
I can’t share a step-by-step chain-of-thought , but here’s a concise explanation of why E is correct :

Schizo-affective disorder is defined in DSM - 5 as a single primary psychotic disorder in which predominant mood symptoms (mania or depression) occur for a substantial portion of the psychotic episode and often co - oc cur with psychotic symptoms . To meet criteria , the mood episode must begin during the active phase of the psychotic symptoms or overlap with them ; the psychotic features do not need to be triggered by treatment . This distinguishes it from :

- Schizophrenia , where mood symptoms are typically secondary or post-on set .
- Affective disorders , which are primarily mood synd rom es without the prominent psychotic features of schizophrenia .
- ‘ Personality disorders ,’ which are enduring patterns of inner experience and behavior , not episodic psychotic -mood synd rom es .

Thus the disorder combines features of both schizophrenia and affective disorders , with mood symptoms developing before or simultaneously with psychosis .

Correct Answer : E .
