

Question:
At birth, the least developed part of the brain is the

Answer Choices:

- A. visual system
- B. thalamus
- C. frontal lobe
- D. brain stem
- E. parietal lobe
- F. cerebellum
- G. cortex
- H. basal ganglia
- I. hypothalamus
- J. limbic system

Reasoning + Answer:

<think>

Concise explanation :

- In early human development , gray matter and neural connectivity in the cerebral cortex mature last because cortical circuits form largely postnatally , with synaptic pruning and refinement continuing into early childhood .
- The brain stem , thalamus , hypothalamus , basal ganglia , and limbic system contain a substantial pre existing white matter and well -established neural circuits at birth .
- The corpus callosum undergoes substantial development postnatally , and sensory cortices and limbic regions show considerable myelination by birth (though still under development) .
- Thus , the least developed part of the brain at birth is the mature , differentiated cortex .

Correct answer : G . cortex

</think>

<answer>

G . cortex

</answer>
