

Question:
Which of the following factors is associated with a decreased risk of Alzheimer's?
Answer Choices:
A. Being African or Hispanic American
B. A lower level of education
C. Living in a city
D. Being married
E. Having a family history of Alzheimer's
F. High intake of saturated fats
G. Older age
H. Eating fish
I. Being a smoker
J. Drinking alcohol regularly

Reasoning + Answer:

<think>
Concise scientific rationale :

- Familial , hereditary , or genetic factors increase Alzheimer’s risk . A family history of the disease signals inherited risk factors and significantly elevates odds , making E the highest-risk factor among the choices .
- Saturated fat and alcohol use are established cardiovascular and neuropsychiatric risk factors associated with vascular pathology (e.g ., stroke) and neurodegeneration , contributing to worse clinical outcomes and symptom progression . Thus , F and J are risk factors .
- Older age increases risk due to increased exposure to pathology and biomarkers over time . While G is an age-related factor , it is not protective .
- Smoking increases cardiovascular risk and contributes to oxidative stress and neuroinflammation , raising AD risk (I).
- Lower education and lower socioeconomic status are associated with worse cognitive outcomes and more neurodegeneration over time , so B is a risk factor .
- Being African or Hispanic American shows variability in risk partly tied to genetic background and comorbidity exposure , but the strongest universal risk factor among the options is family history (A). Urban vs rural residence (C) and marital status (D) do not reliably predict AD risk in a way that differentiates these choices .
- Fish intake is associated with higher long-chain omega - 3 polyunsaturated fatty acid (n - 3 PUFAs), which are neuroprotective and can modulate immune and inflammatory pathways , leading to lower risk of AD .

Therefore , the factor most strongly associated with decreased risk of Alzheimer’s is eating fish .

Correct answer : H . Eating fish
</think>
<answer>
H . Eating fish
</answer>
