

Question:

Which of the following factors is associated with a decreased risk of Alzheimer's?

Answer Choices:

- A. Being African or Hispanic American
- B. A lower level of education
- C. Living in a city
- D. Being married
- E. Having a family history of Alzheimer's
- F. High intake of saturated fats
- G. Older age
- H. Eating fish
- I. Being a smoker
- J. Drinking alcohol regularly

Reasoning + Answer:

<think> Being African or Hispanic American is a risk factor for Alzheimer's , and lower level of education has been linked to an increased risk . Living in a city , being married , older age , and having a family history of Alzheimer's are also associated with a higher risk . Saturated fats and smoking are associated with an increased risk of developing Alzheimer's . Alcohol consumption , when done in moderation , does not necessarily increase the risk . Eating fish , however , is a protective factor , as it can lower the risk of Alzheimer's . </think>

<answer>H</answer>
