

Question:
At birth, the least developed part of the brain is the

Answer Choices:

- A. visual system
- B. thalamus
- C. frontal lobe
- D. brain stem
- E. parietal lobe
- F. cerebellum
- G. cortex
- H. basal ganglia
- I. hypothalamus
- J. limbic system

Reasoning + Answer:

<think>

New borns have a relatively larger fore brain (cere bral hem is pheres and hippo campus) with relatively smaller posterior brain regions (cere bell um , brain stem , and parietal cortex), reflecting neuro development al biology : the tempo ral lobe undergo es the earli est major growth spurt in human infancy , followed by the hippo campus , whereas the thalam us , cere bell um , frontal , parietal , and basal gang lia remain disproport ionately smaller as the infant ’s brain matures . Therefore , the least developed part at birth is the visual system , localized in the occ ipital cortex , which is among the last brain regions to reach adult size .

Correct answer: A. visual system

</think>

<answer>

A. visual system

</answer>
