

Question:
At birth, the least developed part of the brain is the

Answer Choices:

- A. visual system
- B. thalamus
- C. frontal lobe
- D. brain stem
- E. parietal lobe
- F. cerebellum
- G. cortex
- H. basal ganglia
- I. hypothalamus
- J. limbic system

Reasoning + Answer:

<think>

- The brain develops from the base to the front , and from the back to the front during fetal development .
- At birth , the brain stem and cere bell um are the most developed structures as they develop based on simple survival needs and motor functions , respectively .
- The cerebral cortex , including the frontal lobe and parietal lobe , develops more gradually and matures later in life .
- The visual system , thalam us , basal gang lia , hypothalam us , and limbic system also develop but are not as primarily responsible for basic survival as the brain stem and cere bell um are .

Based on these developmental milestones and primary functions , the least developed part of the brain at birth would be the cerebral cortex , specifically the frontal lobe .

</think>

<answer>

C. frontal lobe

</answer>
