

Question:
Which of the following factors is associated with a decreased risk of Alzheimer's?
Answer Choices:

- A. Being African or Hispanic American
- B. A lower level of education
- C. Living in a city
- D. Being married
- E. Having a family history of Alzheimer's
- F. High intake of saturated fats
- G. Older age
- H. Eating fish
- I. Being a smoker
- J. Drinking alcohol regularly

Reasoning + Answer:

<think> Factors associated with a decreased risk of Alzheimer's include mental activities , healthy diet , and social engagement . A higher level of education has been linked with a lower risk of Alzheimer's disease . However , living in a city is not directly linked with the risk of Alzheimer's . So , the best answer among the provided choices is a lower level of education , which indirectly promotes higher mental activities , healthy diet , and social engagement .

- Answer Choices :
- A . Being African or Hispanic American
 - B . A lower level of education
 - C . Living in a city
 - D . Being married
 - E . Having a family history of Alzheimer's
 - F . High intake of saturated fats
 - G . Older age
 - H . Eating fish
 - I . Being a smoker
