

Question:
Which of the following factors is associated with a decreased risk of Alzheimer's?
Answer Choices:

- A. Being African or Hispanic American
- B. A lower level of education
- C. Living in a city
- D. Being married
- E. Having a family history of Alzheimer's
- F. High intake of saturated fats
- G. Older age
- H. Eating fish
- I. Being a smoker
- J. Drinking alcohol regularly

Reasoning + Answer:

<think>
reasoning process here
' Being African or Hispanic American ', ' Being a smoker ', ' Drinking alcohol regularly ', and ' A lower level of education ' are often associated with an increased risk of Alzheimer's , so options A , C , D , and E can be ruled out .
A higher level of education and fish intake are associated with a lower risk of Alzheimer's , while a family history and being older are associated with an increased risk , so options F and G can be eliminated .
Older age and being married can sometimes be correlated with a higher risk of Alzheimer's , so option H might not be the best answer .
Eating fish is known to offer benefits in brain health .
In contrast to those living in a city , people living in rural areas have been found to have a reduced risk of cognitive decline and Alzheimer's .
