

Question:

In research study, a mother and her infant are alone in a room. A stranger enters and the mother leaves the room. When the mother returns to the room, the infant begins to cry and initially continues to do so even after being picked up by the mother. Eventually the infant settles down and returns to playing, apparently happily, with the toys provided. Which attachment classification is most likely to be appropriate for this infant

Answer Choices:

- A. Anxious avoidant
- B. Disorganized
- C. Disoriented
- D. Ambivalent
- E. Dependent
- F. Attachment disorder
- G. Fearful avoidant
- H. Avoidant
- I. Anxious resistant
- J. Secure

Reasoning + Answer:

<think>

- Anxious - Resistant infants cry and resist when their caregiver leaves but become upset and difficult to comfort when the caregiver returns .

- Anxious -Avoidant infants show little distress when the caregiver leaves and ignore the caregiver when they return .

- The infant in this scenario show anxiety and is resistant to the mother 's return after being left alone , hence Anxious Resistant is the best fit .

</think>

<answer>

I . Anxious resistant

</answer>
