

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think> The feedback loop regulating the production of sex hormones in men involves the hypothalamus releasing GnRH (Gonadotropin-releasing hormone), which then stimulates the pituitary gland to release LH (Luteinizing hormone) and FSH (Follicle-stimulating hormone). LH and FSH then stimulate the testes to produce testosterone. Testosterone provides negative feedback to the hypothalamus and pituitary gland to modulate the release of GnRH and FSH. Oxytocin is not directly involved in this feedback loop. </think>

<answer> B. oxytocin </answer>
