

Question:

What is aschizo-affectivedisorder ?

Answer Choices:

- A. A schizo-affective disorder is a term used to describe a personality disorder with features similar to both schizophrenia and affective disorders.
- B. A schizo-affective disorder exclusively involves psychotic symptoms without any mood disturbances.
- C. A schizo-affective disorder is a psychological condition where mood disorders occur as a reaction to schizophrenia treatment.
- D. A schizo-affective disorder is characterized by periods of well-being between episodes of schizophrenia and mood disorders.
- E. A schizo-affective disorder is a combination of schizophrenic and affective disorders, where the affective symptoms must develop before or simultaneously with the psychotic symptoms.
- F. A schizo-affective disorder is a subtype of affective disorders.
- G. A schizo-affective disorder is a subtype of schizophrenia.
- H. A schizo-affective disorder develops after the onset of psychosis.
- I. A schizo-affective disorder is a chronic condition with only affective or mood-related symptoms.
- J. A schizo-affective disorder is a mild form of schizophrenia that does not include affective symptoms.

Reasoning + Answer:

<think>
Schizoaffective disorder is defined in DSM - 5 as a psychiatric condition where psychotic features (hallucinations , delusions , disorganized speech) occur alongside clinically significant mood episodes (major depression or mania , or both) , and the mood symptoms are sufficiently prominent to be a core feature of the disorder . This distinguishes it from schizophrenia , where mood disturbances are not required , and from bipolar disorder , where psychotic features are not a primary component . Option E correctly captures this essential feature : affective symptoms must develop before or simultaneously with psychotic symptoms .

- Other options are incorrect :
- A : This describes a poorly -defined hybrid condition , not the standard DSM - 5 definition .
 - B : Excludes mood symptoms , which are central .
 - C : Confuses etiology with symptomology ; it is not about reaction to treatment .
 - D : Describes episodic course typical of schizophrenia , not schizoaffective disorder .
 - F : Schizoaffective disorder is not a subtype of affective disorders .
 - G : Schizoaffective disorder is not a subtype of schizophrenia .
 - H : Mood episodes can precede the onset of psychosis , but the hallmark is simultaneous or antecedent mood symptoms .
 - I : Overstates ; mood symptoms are necessary but not the only feature .
 - J : It is not mild and does include affective symptoms .

Correct answer : E .
