- G. A schizo-affective disorder is a subtype of schizophrenia.
- H. A schizo-affective disorder develops after the onset of psychosis.
- I. A schizo-affective disorder is a chronic condition with only affective or mood-related symptoms.
- J. A schizo-affective disorder is a mild form of schizophrenia that does not include affective symptoms.

Reasoning + Answer:

<think>

Conc ise explanation :

- In clinical psychiat ry , ‘schizo-a ffective disorder’ refers to a formal diagnostic category in the DSM (3 0 1 . 7 1 in DSM - IV , now DSM - 5). It is a combination of persistent schizophrenia symptoms (disorganized speech , del usions , disorganized or cat atonic behavior , or negative symptoms) and major mood symptoms (major depressive and/or manic features) that occur together . To meet criteria , the mood symptoms must develop either before or simultaneously with the psychotic symptoms , not afterward , thus ruling out options that suggest a post-on set mood process .
- This distingu ishes sch izo -a ffective disorder from :
- Schizophren ia (which lacks mood symptoms).
- Pure affect ive disorders (un related to schizophrenia).
- Bipolar disorder or major depression (not both sets of schizophrenia symptoms).
- Key elements : concurrent presence of schizophren ic (persistent) and affect ive (mood) symptoms ; onset can be simultaneous or mood symptoms preced e or develop with psychotic features ; not a personality disorder or exclusively a psychotic/s omatic condition ; not a milder schizophrenia .

Correct answer : E . A schizo -a ffective disorder is a combination of schizophren ic and affect ive disorders , where the affect ive symptoms must develop before or simultaneously with the psychotic symptoms .
