

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
If Janet’s ducks lay 16 eggs per day and she eats 3 for breakfast, that means she has $16 - 3 = 13$ eggs left.
She then bakes muffins for her friends using 4 eggs, so that leaves her with $13 - 4 = 9$ eggs.
Since she sells each egg for \$2, the total amount she makes per day at the farmers' market is 9 eggs
* \$2 / egg = \$18.
</think><answer>18</answer>
